REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: None of the prior art suggests all of the instantly claimed limitations, in particular the coated, varying diameter roller to be between 1 and 3 mm in diameter. Aser et al. shows the making of a roller with the same shape and materials but fails to show using the roller in hand held film transfer tool. Nose et al. shows the use of resin rollers in hand held film transfer tools but there is no indication as to the diameter of the roller and comparable sizes of the roller to other tool components in the drawings would suggest that the roller is greater than 3 mm in diameter. Hsu shows a small diameter roller in a hand held film transfer tool but this roller is hollow and rides on a spindle, so making a roller of less multilayer, hollow roller of diameter less than 3 mm would, at the very least, be unobvious to one of ordinary skill, if not impractical. Lin also shows a small diameter roller in a hand held film transfer tool. Although Lin does not show a hollow roller which would have been impractical to modify, one of ordinary skill in the art would not find any motivation to make the roller of Lin multilayered and with varying diameter.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
